

Smart Farmer - IOT Enabled Smart Farming Application

**DEVELOP A PYTHON SCRIPT TO PUBLISH AND SUBSCRIBE TO
IBM IOT PLATFORM**

Team ID	PNT2022TMID12161
Team Leader	RAGUL G
Team Members	AKILA A ARAVIND B GOKUL RAJA S

CODE:

```
import time
import sys
import ibmiotf.application
import ibmiotf.device
import random
```

```
#Provide your IBM Watson Device Credentials
organization = "1jk4ps"
deviceType = "PNT2022TMID51719"
deviceId = "Smart_Farmer"
authMethod = "token"
```

```
authToken = "l1*53hClhmEbf!&Es&"
```

```
# Initialize GPIO
```

```
def myCommandCallback(cmd):  
    print("Command received: %s" % cmd.data['command'])  
    status=cmd.data['command']  
    if status=="lighton":  
        print ("led is on")  
    else :  
        print ("led is off")  
  
    #print(cmd)
```

```
try:
```

```
    deviceOptions = {"org": organization, "type": deviceType, "id": deviceId,  
"auth-method": authMethod, "auth-token": authToken}  
    deviceCli = ibmiotf.device.Client(deviceOptions)  
    #.....
```

```
except Exception as e:
```

```
    print("Caught exception connecting device: %s" % str(e))  
    sys.exit()
```

```
# Connect and send a datapoint "hello" with value "world" into the cloud as an  
event of type "greeting" 10 times  
deviceCli.connect()
```

```

while True:
    #Get Sensor Data from DHT11

    temp=random.randint(0,100)
    Humid=random.randint(0,100)

    data = { 'temp' : temp, 'Humid': Humid }
    #print data
    def myOnPublishCallback():

        print ("Published Temperature = %s C" % temp, "Humidity = %s %" %
Humid, "to IBM Watson")

        success = deviceCli.publishEvent("SDFRN", "json", data, qos=0,
on_publish=myOnPublishCallback)
        if not success:
            print("Not connected to IoT")
            time.sleep(1)

        deviceCli.commandCallback = myCommandCallback

# Disconnect the device and application from the cloud
deviceCli.disconnect()

```

OUTPUT:

The image shows a Python script running in an IDE (IBM Watson IoT Platform) and its output in a terminal window. The script is a Python 3.9.8 application that connects to the IBM Watson IoT Platform and sends sensor data to the cloud.

Python Script (code.py):

```
import time
import sys
import ibmiotf.application
import ibmiotf.device
import random

#Provide your IBM Watson Device Credentials
organization = "1jk4ps"
deviceType = "PNT2022TMD51719"
deviceId = "Smart_Farmer"
authMethod = "token"
authToken = "11*53bc1HmBf!4E84"

# Initialize GPIO

def myCommandCallback(cmd):
    print("Command received: %s" % cmd.data['command'])
    status=cmd.data['command']
    if status=="lighton":
        print ("led is on")
    else:
        print ("led is off")
    #print(cmd)

try:
    deviceOptions = {"org": organization, "type": deviceType, "id": deviceId, "auth-meth": authMethod}
    deviceCli = ibmiotf.device.Client(deviceOptions)
    #.....

except Exception as e:
    print("caught exception connecting device: %s" % str(e))
    sys.exit()

# Connect and send a datapoint "hello" with value "world" into the cloud as an event of type
deviceCli.connect()

while True:
    #Get Sensor Data from DHT11
    temp=random.randint(0,100)
    #.....
```

Terminal Output:

```
Python 3.9.8 (tags/v3.9.8:bb3fdecf, Nov 5 2021, 20:48:33) [MSC v.1929 64 bit (AMD64)] on win
Type "help", "copyright", "credits" or "license()" for more information.

IBM Watson IoT Platform Dashboard:

The dashboard shows the device **Smart_Farmer** (PNT2022TMD51719) is **Connected**. The **Recent Events** tab displays a stream of data points:

Event	Value	Format	Last Received
SDFRN	("temp":56,"Humid":69)	json	a few seconds ago
SDFRN	("temp":46,"Humid":47)	json	a few seconds ago
SDFRN	("temp":14,"Humid":19)	json	a few seconds ago
SDFRN	("temp":99,"Humid":44)	json	a few seconds ago
SDFRN	("temp":13,"Humid":18)	json	a few seconds ago
